Professional Profile

Full-stack developer at IBM building AML compliance systems for MAPFRE's insurance platform. C#/.NET + React specialist. IPN Telematics Engineering, graduating Dec 2026.

Work Experience

Student / Application Developer, IBM (Client: MAPFRE)

2026 – Present

- Implemented Anti-Money Laundering (AML) compliance controls across multiple insurance portal views, delivering full-stack coverage (C#/.NET backend + JavaScript frontend) within deadline with zero critical post-deployment defects.
- Resolved 20+ production bugs across SQL-backed services within sprint deadlines by systematically tracing failures across the full stack — from JavaScript UI layer through C#/.NET business logic — reducing incident recurrence and stabilizing core MAPFRE insurance workflows.
- Integrated MAPFRE REST APIs to connect frontend views with backend microservices, enabling real-time data exchange and eliminating manual data-passing steps across 3+ application modules.
- Redesigned UI/UX across 8+ insurance portal views using JavaScript, aligning visual standards across the platform and reducing design inconsistencies reported by QA.
- Participated in code reviews, providing feedback on C#/.NET and JavaScript pull requests and supporting junior team members in adopting clean architecture patterns and coding standards.
- Acted as a technical reference for teammates on frontend integration tasks, unblocking colleagues on API consumption and component structure during active sprint cycles.
- Contributed to Scrum ceremonies including sprint planning, daily stand-ups, and retrospectives; supported CI/CD deployments and participated in release validation across multiple sprint iterations.

Junior Web Developer, RyR Protection

2025

- Reduced PostgreSQL query response time by ~60% by rewriting 8 slow queries and adding targeted indexes, improving load performance for ~500 daily active users.
- Delivered 12 RESTful API endpoints in C#/.NET following microservices principles, cutting frontend-backend integration time by 40%.
- Refactored 5 high-traffic React components, reducing page render time by ~35% and cutting UI bugs by half within the first sprint after release.

Projects

Mácará — Full-stack app in production for a local coffee shop. *React, React Native, Node.js* macaracafe.com

Ecoprep — Educational platform in production with live users. *React, Node.js* ecoprep.com.mx

Other: Data Intelligence Platform (*React, C#/.NET*), Audit Control Platform (*React, Node.js*), P2P Torrent Server (*Python*) — github.com/EseWey21

Education

Instituto Politécnico Nacional, UPIITA

2021 – Present

B.Sc. in Telematics Engineering (*expected Dec 2026*)

Technical Skills

Frontend: React, JavaScript, HTML, CSS, React Native **Backend:** C#, .NET, Node.js

Databases: MySQL, PostgreSQL, SQL **Tools:** Git, Postman, LaTeX, Microsoft Office

Methodologies: Microservices Architecture, Clean Architecture, CI/CD, Agile / Scrum, REST APIs

Languages

Spanish — Native | English — B2
